Public wireless LAN security

● **Encryption in wireless zones**

Encryption between wireless zones is not implemented under the Service.

● **Risks of using public wireless LAN service**

Article 14 As a public wireless LAN service, the Service can also be used by third parties other than the User. Therefore, it is possible for malicious third parties to deliberately intercept radio waves and access personal information such as ID names, passwords, or credit card numbers, etc., as well as communication contents such as email contents, etc. We ask that the User make careful judgments and take responsibility in regards to particularly important communication.
